

DEMONSTRATION OF AAMSI's ON-LINE JOURNAL

by Douglas R. Mackintosh and  
Michael A. Jenkin

American Association for Medical Systems and Informatics  
4405 East-West Highway  
Bethesda, Maryland 20814

The purpose of this demonstration is to explain the features and potential uses of AAMSI's recently launched on-line electronic publication.

The on-line journal allows medical practitioners and researchers to communicate with one another and exchange diagnosis and treatment algorithms, software, and protocols, information, manuscripts, and news. It acts as a clearinghouse on computer applications in medical care and provides an efficient, timely medium for publishing materials of interest to members.

The journal is a menu driven, hierarchial publication that allows its readers to select from many different items of interest. In general these items include:

- Index of Current Journals
- Feature Articles
- Vendor Information
- Meetings of Interest
- President's Executive Director's and Editors' Messages
- Journal Article Abstracts and Book Reviews
- Editorial Comments
- Organizational News
- Readers Corner
- AAMSI Members On-Line
- Special Interest Groups

Demonstrators discuss access, on-line and off-line editing, and production of hard copy issues.
