Addendum 2 to the Closure Report for Removal of the Use Restriction

This document constitutes an addendum to the *Closure Report for Corrective Action Unit 358: Areas 18, 19, 20 Cellars/Mud Pits, Nevada Test Site, Nevada*, January 2004 as described in the document *Supplemental Investigation Report for FFACO Use Restrictions, Nevada Test Site, Nevada* (SIR) dated November 2008. The SIR document was approved by NDEP on December 5, 2008. The approval of the SIR document constituted approval of each of the recommended UR removals. In conformance with the SIR document, this addendum consists of:

- This page that refers the reader to the SIR document for additional information
- The cover, title, and signature pages of the SIR document
- The NDEP approval letter
- The corresponding section of the SIR document

This addendum provides the documentation justifying the cancellation of the UR for CAS 19-09-05, Mud Pit. This UR was established as part of a *Federal Facility Agreement and Consent Order* (FFACO) corrective action and is based on the presence of contaminants at concentrations greater than the action levels established at the time of the initial investigation (FFACO, 1996).

Since this UR was established, practices and procedures relating to the implementation of risk-based corrective actions (RBCA) have changed. Therefore, this UR was re-evaluated against the current RBCA criteria as defined in the *Industrial Sites Project Establishment of Final Action Levels* (NNSA/NSO, 2006). This re-evaluation consisted of comparing the original data (used to define the need for the UR) to risk-based final action levels (FALs) developed using the current Industrial Sites RBCA process.

The re-evaluation resulted in a recommendation to remove the UR because contamination is not present at the site above the risk-based FALs. Requirements for inspecting and maintaining this UR will be canceled, and the postings and signage at this site will be removed. Fencing and posting may be present at this site that are unrelated to the FFACO UR such as for radiological control purposes as required by the *NV/YMP Radiological Control Manual* (NNSA/NSO, 2004). This modification will not affect or modify any non-FFACO requirements for fencing, posting, or monitoring at this site.

RE: Approval of Final Supplemental Investigation Report for FFACO Use Restrictions
Nevada Test Site and Tonopah Test Range, Nevada, Revision 0, November
2008
Federal Facility Agreement and Consent Order

Dear Mr. Boehlecke:

The Nevada Division of Environmental Protection, Bureau of Federal Facilities (NDEP) staff has received and reviewed the submittal of the Final Supplemental Investigation Report for FFACO Use Restrictions, Nevada Test Site and Tonopah Test Range, Nevada, Revision 0, November 2008. The report is hereby approved without comments pursuant to Subpart XII.8.a of the *Federal Facility Agreement and Consent Order* (FFACO).

Address any questions regarding this matter to either Ted Zaferatos at (702) 486-2850, ext. 234, Jeff MacDougall at (702) 486-2850, ext. 233, or me at (702) 486-2850, ext. 231.

Sincerely,

/s/Chris Andres for

T.H. Murphy
Chief
Bureau of Federal Facilities

Table 4-5
Sample Results for SVOCs Detected above Minimum Detectable Concentrations at UR 12-19-01

Sample Location	Sample Number	Depth (ft bgs)	Contaminants of Potential Concern (mg/kg)
			Bis(2-Ethylhexyl)Phthalate
Final Action Levels^a			120
D02	339D002	0.0 - 0.5	0.91

^aBased on U.S. Environmental Protection Agency, *Regional Screening Levels for Chemical Contaminants at Superfund Sites* (EPA, 2008a).

bgs = Below ground surface

ft = Foot

mg/kg = Milligrams per kilogram

4.3 CAU 358, CAS 19-09-05 – Mud Pit

4.3.1 CAS Description

Corrective Action Site 19-09-05 consists of a mud pit located in Area 19. The mud pit measures 97 by 81 ft, with a 1-ft thick accumulation of dry drilling mud within its boundaries. Because diesel fuel was commonly used as a drilling lubricant, elevated levels of TPH were detected at the site. The site was subjected to corrective actions that included the implementation of a UR for TPH contamination (NNSA/NSO, 2003).

4.3.2 Current Use Restriction Description

A UR is in place at the site due to TPH contamination. The UR, as recorded in the FFACO, states the future use of land related to this CAU, as described by surveyed location, is restricted from DOE or U.S. Air Force activity that may alter or modify the containment control, as identified by the state and in the CR or other CAU documentation, unless appropriate concurrence is obtained in advance. T-posts mark the corner of the active UR 19-09-05. There are no monitoring requirements associated with the UR (NNSA/NSO, 2004).

4.3.3 Basis for Current Use Restriction

Samples collected at CAS 19-09-05 were analyzed for VOCs, SVOCs, TPH, PCBs, total *Resource Conservation and Recovery Act* metals, and gamma spectroscopy. Based on the results, TPH was the

only contaminant present above action levels. Concentrations of TPH exceeded the action level of 100 mg/kg in all four samples; therefore, a UR was implemented. [Table 4-6](#) contains analytical results for soil samples used to establish UR 19-09-05 (NNSA/NSO, 2004). Although VOC and SVOC concentrations were reported below action levels, the action levels and analytical results are not present in the initial investigation documentation. Therefore, this site was included in the supplemental investigation.

Table 4-6
Sample Results for the Basis of UR 19-09-05

Sample Identification	Depth (ft bgs)	TPH Diesel (mg/kg)	TPH Oil (mg/kg)
		Action Level 100 mg/kg	Action Level 100 mg/kg
190905-0-1MP	Surface	138	970
190905-6-1MP	0.5	17	150
190905-0-2MP	Surface	15	170
190905-1-2MP	1.0	22	170

Note: Bold text indicates value exceeding the action level.

bgs = Below ground surface

ft = Foot

mg/kg = Milligrams per kilogram

TPH = Total petroleum hydrocarbons

4.3.4 Basis for Use Restriction Modification

Two new environmental samples were collected at CAS 19-09-05 according to the sampling plan (NNSA/NSO, 2008) and analyzed for VOCs and SVOCs in which the hazardous constituents of TPH are reported. [Table 4-7](#) presents the VOC results that were detected above the MDCs. None of the SVOCs were detected above MDCs.

The analytical results were evaluated using the RBCA process (NNSA/NSO, 2006) in which the individual results of contaminants (detected above the MDCs) were compared to the FALs. None of the hazardous constituents of TPH were identified above their respective FALs; therefore, there are no COCs present at this site.

Table 4-7
Sample Results for VOCs Detected above Minimum Detectable Concentrations at UR 19-09-05

Sample Location	Sample Number	Depth (ft bgs)	Contaminants of Potential Concern (mg/kg)		
			Acetonitrile	Ethylbenzene	Xylenes (total)
Final Action Levels^a			1,800	400	420
G01	358G001	0.0 - 0.5	0.015 (J)	0.000388 (J)	0.00173
G02	358G002	0.0 - 0.5	--	0.000307 (J)	0.0017

^aBased on U.S. Environmental Protection Agency, *Regional Screening Levels for Chemical Contaminants at Superfund Sites* (EPA, 2008a).

bgs = Below ground surface

J = Estimated value

ft = Foot

-- = Not detected above minimum detectable concentrations.

mg/kg = Milligrams per kilogram

4.3.5 Recommended Modification

Remove the FFACO UR, signage, and associated inspection and maintenance requirements from this site.

4.4 CAU 403, CAS 03-02-004-0360 – Underground Storage Tanks

4.4.1 CAS Description

Corrective Action Site 03-02-004-0360 consists of subsurface petroleum hydrocarbon releases from two USTs (one gasoline and one diesel) formerly located at the Second Gas Station in Area 3 of the TTR. The Second Gas Station was in use from approximately 1965 to 1980. The USTs were located approximately 36 ft east of the Old Light Duty Shop, Building 0360. Sometime between August 8, 1982, and June 13, 1987, the two USTs and associated dispensary stations were removed. During removal of the 4000-gal diesel UST, a breach was observed below the top of the tank, and the soil surrounding the tank appeared to be visibly contaminated. There were no visible signs of contamination during removal of the gasoline tank. The site was subject to corrective actions that included the implementation of a UR for TPH contamination (DOE/NV, 1996).
