ACKNOWLEDGMENTS

Many people helped with the production of these lists. Louise Horstman, Pecan Resources, prepared the initial review and update of a species list originally printed for internal use by Land Information Services Division, Alberta Forestry, Lands and Wildlife (FLW). Derek Johnson, Canadian Forestry Service, reviewed the lists at various stages and was particularly helpful in updating the information on the mosses and lichens.

Several reviewers provided comments on components of the lists and suggested more appropriate common names, design considerations, computer techniques, etc. We would like to thank the following for their efforts: Natural and Protected Areas Program, Public Lands Division, FLW -- Lorna Allen, Joyce Gould, John Rintoul; Provincial Museum of Alberta -- Julie Hrapko; University of Alberta, Dept. of Botany -- Dale Vitt; Alberta Forest Service -- Brian Maier; University of Calgary, Department of Biological Sciences -- Bonnie Smith; Charles Bird.

The input of species names into the data base was largely completed by Brad Thomas. The coordination and editing of the lists was the responsibility of David M. Ealey of the Editorial Services Unit, General Services Division, Alberta Energy/Forestry, Lands and Wildlife.

1.0 INTRODUCTION

These lists are based on a list prepared by Land Information Services Division, Alberta Forestry, Lands and Wildlife (LISD 1988). The purpose of producing such lists is to provide a standard set of taxonomically current species names for plants found in Alberta, including accepted common names for use in departmental reports. The lists are intended to be used by departmental report writers and consultants writing primarily for the Department of Forestry, Lands and Wildlife.

Plant species names have been brought up-to-date with current taxonomy and common usage, according to the criteria stated below. These names have been entered into a dBASE IV data base, to allow future revisions of the plant names. The master list is maintained by Editorial Services, so that revisions can be prepared consistently. Any changes or additions should be forwarded to the unit as outlined in Section 1.3.

1.1 Components of Alberta Vegetation Species List

The following identifies each of the eight columns that make up the species list: 1. CODE - A seven-letter code consisting of the first four letters of the genus name plus the first three letters of the species name. Occasionally duplicates were created according to these rules, but they were subsequently eliminated by choosing a different seventh letter for one of the species. Modifications were made for species having three-letter genus names by adding a fourth letter from the species portion of the Latin name. The computer code is the index for identification and sorting of each vegetation species and is thus in the first column of the vegetation species list. In addition, the code will be useful as a short-form reference for workers generating species lists for projects or study areas; this is why the code is placed in the last column before the checkpoint in the species group checklists.

2. LATIN NAME - Primary sources of Latin names were as follows for different species groups: vascular plants, Moss (1983); mosses, Ireland et al. (1987); liverworts and hornworts, Stotler and Crandall-Stotler (1977); lichens, Egan (1987). Other sources were used to fill gaps and to add more recent nomenclature (see 2.0 References).

3. AUTHORITY - Sources of authorities for Latin names were as above. In the vegetation species list, the taxonomic authorities are combined with the Latin name, in a single column and separated by a dash.

4. ENGLISH COMMON NAME, adjectival portion - The English common name was separated into an adjectival first part and a root name (next column). This was to facilitate computer sorting on the first part of the name and also sorting of similar types of plants. Where the common name consisted of only one word, that name was usually listed in this first column, unless the name was clearly a root word.

5. ENGLISH COMMON NAME, root word or genus - The second part of the English common name is frequently a name for the genus. When they are, these portions of the name are incorporated in this second of two columns.

6. SOURCE - This refers to the source for the English common name and

is largely used for vascular plants. E.H. Moss (EHM) was the primary source of these common names, and it was Moss's first-listed common name for a species that was selected. Where Moss did not show a common name, A.C. Budd (ACB), who was the initiator of Budd's Flora of the Canadian Prairie Provinces (Looman and Best 1987), was the source. If neither source had a common name, then a genus' common name might be used; however, no source was listed for such names. Occasionally, the common name for an earlier synonym from Budd was used if Moss had no common names. In their review comments, botanists strongly favoured some names by Budd over Moss' names, and as a result the (ACB) name was used. The source (BOT) refers to botanists in Alberta who have expressed a concerted disapproval of Moss's or Budd's names or have anglicized the Latin names directly or else have developed names, where neither Moss nor Budd have provided names. A few other sources were identified for plants new to the province or for plants not named by Moss or Budd or for nonvascular plants. These sources were as follows: (BCM) - B.C. Ministry of Forests reports; (DJ1) - Johnson (1987); (ECW) - Alex et al. (1980); (G&I) - Glime and Iwatsuki (1990); (GLI) - Glime (1989); (H&C) - Hitchock et al. (1950-1969); (P&C) - Porsild and Cody (1979); and (W&W) - Wallis et al. (1987).

7. FAMILY - The Latin family name is taken from the scientific sources identified above.

8. F (form) - The form or plant type is indicated in this column: A - tree; B - shrub; C - forb; D - mosses and liverworts; G - graminoid; L - lichen. Generally, the way in which these forms are applied is traditional; however, determination of what constitutes a shrub was difficult, given the range of definitions found. The definition chosen was to reflect similar usage in Ontario (Soper and Heimburger 1982). A shrub was defined as a low-growing, perennial plant, usually with several main stems, arising near the ground, that are at least partially woody.

Species group checklists are included which group all taxa belonging to the distinct forms identified above. The checklists do not include the authority or source information and are rearranged to be more useful for project use. The number of taxa (nearly all are species, except for a few distinct hybrids) included in each checklist are as follows: trees - 28; shrubs - 160; forbs - 1208; grasses - 361; mosses - 601; lichens - 578. Total vascular taxa amount to 1757 species, while lichens and mosses combine to 1179 species. The overall total of vegetation taxa for Alberta is 2936 species.

1.2 The Spelling of Common Names

Although the sources identified above were used to determine the accepted common name, they produced such a variance in word formation/spelling that the need was obvious for a standard approach to spelling of common names. The rules outlined in Loomis and Best (1987) and in Alex et al. (1980) were used because of their consistency.

These rules are as follows:

1. Written as one word

(a) When the modified word is **plant** or a type of plant, as in lead**plant**, skunk**bush**, pea**tree**, pea**vine**, jewel**weed**, lung**wort**; except when the modifier is more than one word, as in Kentucky coffee **tree**, or a hyphened word, as in silk-tassel **bush**, or a proper noun, as in Virginia **creeper**.

(b) When the modified word is a part of a plant, as in june**berry**,

twayblade, buffalobur, coneflower, leatherleaf, bladderpod, balsamroot, bugseed, twistedstalk, bluestem, buckthorn, wormwood.

(c) When the modified word is a part of animal anatomy, as in arrowhead, bluelips, cattail, beardtongue; except when the modifier is in the possessive case, as in bird's-eye, crane's-bill.

(d) When the words are figurative or suggestive, as in **beggarticks**, **fairybells**, **meadowsweet**, **paintbrush**, except when the modifier is in the possessive case, as in **baby's-breath**, or when it is a proper noun or the adjectival form of a proper noun, as in **Venus-slipper**, **Indian-pipe**, or when letters demand separation for ease in reading or pronunciation, as in **morning-glory**.

2. Written as separate words

a) When the modified word is taxonomically correct, as in red **clover** (genus Trifolium), alkali **grass** (family Gramineae), fringed **milkwort** (genus Polygala), woolly **plantain** (genus Plantago).

(b) When the modifier is the word **common**, **false**, **mock**, **wild** as in **common** camas, **false** flax, **mock** pennyroyal, **wild** chives.

(c) When the modifier is a proper noun, as in **Douglas** hawthorn, **Mackenzie's** hedysarum.

(d) Exceptions in 1.

3. Written hyphened

(a) When the modified word is not taxonomically correct, as in sweet-**clover** (genus Melilotus, not genus Trifolium), whitlow-**grass** (genus Draba, not family Gramineae), sea-**milkwort** (genus Glaux, not genus Polygala), water-**plantain** (genus Alisma, not genus Plantago), except in a few instances of spelling of long standing, as in **burdock**, **buckwheat**.

(b) When the modifier is a compound, as in **round-leaved** hawthorn, and whether or not the modified word is taxonomically correct, as in **salt-meadow** grass (family Gramineae), **blue-eyed** grass (genus Sisyrinchium, not family Gramineae).

(c) In certain three- or four-word groups, as **balm-of-Gilead**, **butter-and-eggs**, **grass-of-Parnassus**, **lily-of-the-valley**, **touch-me-not**.

(d) Exceptions in 1.

1.3 Changes and Updates

Information on any new species of plants discovered for Alberta, or taxonomic revisions, will be incorporated into the master species list where appropriate. When sufficient changes are accumulated to warrant reprinting, new lists will be generated. All users are encouraged to forward any changes/errors that are discovered.

To make changes more easily and accurately, the following form should be filled out and sent to this address: Editorial Services Unit, General Services Division, Alberta Energy/Forestry, Lands and Wildlife, 6th Floor, South Tower Petroleum Plaza, 9915 - 108 St., Edmonton, Alberta T5K 2C9.

VEGETATION SPECIES CHANGES/REVISIONS:

For each species, please submit the following information.

Species Name_____.

Taxonomic Authority_____.

Common Name_____.

Family_____.

Plant Type (spell out) _____.

Reference_____

_____

_____

Collector (if known)_____

_____

Approximate Location (for new species)_____

_____

Proposed Change_____
