Suggestions

Novel species of fungi described in the present study include the following from Australia: *Neoseptorioides eucalypti* gen. & sp. nov. from *Eucalyptus radiata* leaves, *Phytophthora gondwanensis* from soil, *Diaporthe tulliensis* from rotted stem ends of *Theobroma cacao* fruit, *Diaporthe vawdreyi* from fruit rot of *Psidium guajava*, *Magnaportheopsis agrostidis* from rotted roots of *Agrostis stolonifera* and *Semifissispora natalis* from *Eucalyptus* leaf litter. Furthermore, *Neopestalotiopsis egyptiaca* is described from *Mangifera indica* leaves (Egypt), *Rousoella mexicana* from *Coffea arabica* leaves (Mexico), *Calonectria monticola* from soil (Thailand), *Hygrocybe jackmanii* from littoral sand dunes (Canada), *Lindgomyces madisonensis* from submerged decorticated wood (USA), *Neofabraea brasiliensis* from *Malus domestica* (Brazil), *Geastrum diosiae* from litter (Argentina), *Ganoderma wiioense* on angiosperms (Ghana), *Arthriniun gutiae* from the gut of a grasshopper (India), *Pyrenochaeta telephoni* from the screen of a mobile phone (India) and *Xenoleptographium phialoconidium* gen. & sp. nov. on exposed xylem tissues of *Gmelina arborea* (Indonesia). Several novelties are introduced from Spain, namely *Psathyrella complutensis* on loamy soil, *Chlorophyllum lusitanicum* on nitrified grasslands (incl. *Chlorophyllum arizonicum* comb. nov.), *Aspergillus citocrescens* from cave sediment and *Lotinia verna* gen. & sp. nov. from muddy soil. Novel foliicolous taxa from South Africa include *Phyllosticta carissicola* from *Carissa macrocarpa*, *Pseudopyricularia hagahagae* from *Cyperaceae* and *Zeloasperisporium searsiae* from *Searsia chirindensis*. Furthermore, *Neophaeococcomyces* is introduced as a novel genus, with two new combinations, *N. aloes* and *N. catenatus*. Several foliicolous novelties are recorded from La Réunion, France, namely *Ochroconis pandanicola* from *Pandanus utilis*, *Neosulcatispora agaves* gen. & sp. nov. from *Agave vera-cruz*, *Pilidium eucalyptorum* from *Eucalyptus robusta*, *Strelitziana syzygii* from *Syzygium jambos* (incl. *Strelitzianaceae* fam. nov.) and *Pseudobeltrania ocoteae* from *Ocotea obtusata* (*Beltraniaceae* emend.). Morphological and culture characteristics along with ITS DNA barcodes are provided for all taxa.

Keywords: ITS DNA BARCODES; LSU; NOVEL FUNGAL SPECIES; SYSTEMATICS
