Four new species of *Lasiodiplodia*; *L. citricola*, *L. gilansensis*, *L. hormozganensis* and *L. iraniensis* from various tree species in Iran are described and illustrated. The ITS and partial translation elongation factor-1 α sequence data were analysed to investigate their phylogenetic relationships with other closely related species and genera. The four new species formed well-supported clades within *Lasiodiplodia* and were morphologically distinct from all other known species.

Keywords: BOTRYOSPHAERIACEAE; EF-1 α ; ITS; LASIODIPLODIA; PHYLOGENY; TAXONOMY

Document Type: Research Article

Publication date: 2010年12月23日
