PREFACE

The mission of the U.S. Department of Energy's Federal Energy Management Program (FEMP) is to reduce the cost of Government by advancing energy efficiency, water conservation, and the use of solar and other renewable technologies. This is accomplished by creating partnerships, leveraging resources, transferring technology, and providing training and technical guidance and assistance to Federal agencies. Each of these activities is directly related to achieving the requirements set forth in the Energy Policy Act of 1992 and the goals that have been established in Executive Order 13123 (June 1999), as well as supporting activities that promote sound management of Federal financial and personnel resources. The Pacific Northwest National Laboratory (PNNL) supports the FEMP mission in all activity areas.

This document provides information that will be useful to FEMP in targeting and identifying Federal sites for energy efficiency project potential. This document consolidates Federal energy data into a single source reference from which FEMP that can work to more efficiently target opportunities. It is hoped that this will ultimately assist in the development and implementation of more Federal sector energy efficiency projects financed with private sector capital.

ACKNOWLEDGEMENTS

The authors gratefully acknowledge Bill Sandusky, Sue Arey, and Dave Hunt of Pacific Northwest National Laboratory for their assistance and insights into this report. Also, we would like to thank the numerous representatives from Federal agencies that provided the data that is the basis of this document -- acknowledgements go to Eileen Westervelt from the U.S. Army Corps of Engineering Research Laboratory, Richard Wickman from the National Aeronautics and Space Administration, David Borroell from the Navy, Tim Arthurs of the State Department, and Noel Fenlon from the Department of Justice – Bureau of Prisons.

SUMMARY

The Federal Energy Management Program (FEMP) has funded the Pacific Northwest National Laboratory (PNNL)¹ to collect site-level energy data from Federal agencies. PNNL contacted 12 of the Federal agencies that are the largest energy users for site-level energy data: Army, Air Force, Navy and Marine Corps, Department of Energy, U.S. Postal Service, Veterans Administration, General Services Administration, Department of Justice, Department of Interior, National Aeronautics and Space Administration, Department of State, and Health and Human Services. These agencies represent over 96%² of the total energy use of the Federal government. The agencies that were able to release detailed site-level information for the purposes of this internal report are listed below:

- Army
- Navy and Marine Corps
- National Aeronautics and Space Administration
- Department of Justice-Bureau of Prisons
- Department of State.

It should be noted that not all of these agencies responded to the data requests for a variety of reasons, so their omission should not be viewed in a negative way.

It is the intent of the authors that this information be utilized by FEMP to assist in the understanding of how energy is consumed in the Federal sector and to target sites for energy projects. For example, this detailed data can help prioritize sites for projects by revealing large sites, large energy users, sites that have high energy use intensity, or sites that pay high rates for energy.

1 INTRODUCTION

The Federal government has approximately 500,000 buildings, which consumed 349.4 trillion British thermal units (Btu) of energy at a total cost of \$3.5 billion in FY 1998³. This level of energy represents a 25% decrease per gross square foot relative to FY 1985. Executive Order (EO) 13123 has set new energy reduction goals for the Federal government. For standard buildings and facilities, a 30% reduction by 2005 and 35% by 2010 is required (based on FY 1985 baseline). For energy intensive operation such as labs and research and development facilities, a reduction of 20% by 2005 and 25% by 2010 (based on FY 1990 baseline) is required⁴. Therefore, to reach these goals, there are additional cost effective energy efficiency improvements that must be made.

Federal agencies are increasingly losing appropriations to fund energy projects and are looking towards alternative financing mechanisms such energy savings performance contracts (ESPC), DOE's Super ESPC, and utility energy service contracts (UESC) to finance projects. Therefore, to help assist Federal agencies in developing alternatively financed projects, site-level energy consumption data can play a helpful role in characterizing sites for energy efficiency projects.

⁴ Executive Order 13123. June 3, 1999. Greening the Government Through Efficient Energy Management. Washington D.C.

2 AGENCY DATA

Each individual agency collects and maintains data on site energy consumption and cost in a different manner. Typically, agencies collect site-level energy data either by individual site or through a regional coordinator. Agencies are required to classify their buildings into three categories: 1) Standard Buildings and Facilities; 2) Energy Intensive Operations; and 3) Exempt. (It should be noted that not all agencies provided us with a level of detail that separates out each building category, but wherever possible, this distinction is made.) All the site-level data is tallied annually for required reporting to the Department of Energy. It was our intent to collect site-level data from as many agencies as possible, but we focused on the eight agencies that are the largest energy users.

The largest energy consumers in the Federal government reside in the Department of Defense: the Army, Air Force, Navy and Marine Corps, which represent over 63% of the total Federal sector energy use (based on FY 1998 energy data). The largest four energy consumers in the civilian agencies are the Department of Energy (DOE), U.S. Postal Service (USPS), Veterans Administration (VA), and General Services Administration (GSA). Therefore, we first concentrated on these top eight agencies, which represent over 87% of the total energy of the Federal sector (based on FY 1998 energy data). We also contacted five other smaller civilian agencies: Department of Justice (DOJ), Department of Interior (DOI), National Aeronautics and Space Administration (NASA), Department of State (State), and Department of Health and Human Services (HHS).

The agencies that responded to our requests and publicly released their data were: Army, Navy, Marine Corps, National Aeronautics and Space Administration, Department of State, and Department of Justice-Bureau of Prisons. Summary data from each agency is shown in Table 1.

The remaining agencies contacted were unable to release site-level information for a variety of reasons. For some agencies the majority of the sites are very small and scattered all over the country, (as in the case of the U.S. Postal Service and Health and Human Services), which makes site-level data unreasonable to collect and maintain. For other agencies, there were sensitivities revolving around the public release of their data.

The following section describes data references of each agency that provided site-level energy data. Information is presented on how the data was collected and what data was provided by the agency. All agency data is detailed in tables in the Appendix, which follows the main body of this report. If data is needed in a different format than is presented in the Appendix, please contact Kate McMordie at (505) 899-3609 or kate.mcmordie-stoughton@pnl.gov for assistance.

*Army's "Other Energy Cost" is all fuel usage cost combined, except electricity.

2.1 Department of the Army

The Army reports site-level energy data into what is known as “RADDs”, which stands for Revised Army DUERS Data System (DUERS is an acronym for the Defense Utility Energy Reporting System). This system is not publicly available and is not easily accessible. However, the Renewable Energy Efficiency Program (REEP), administered by the U.S. Army Construction Engineering Research Laboratory (CERL), has compiled RADDs data on the larger Army sites (sites generally larger than 1,000,000 sq-ft). REEP is a software program that analyzes and identifies potential energy efficiency measures at military installations.

CERL provided PNNL a wealth of information on large Army installations for FY 2000 from the REEP database. The information, which is provided in this report in Table A-1a and Table A-1b in the Appendix, is as follows:

- Site name and location
- Gross square footage
- Annual purchased electricity
- Annual electric consumption and cost
- Baseline area and energy consumption for 1985 levels
- Total cost of annual energy consumption (other than electricity): natural gas, fuel oil, and coal
- Annual water consumption.

Other information available through REEP but not included in this report includes floor space broken down by building type, population, and electric demand, for example. It should be noted that this data does not include the total energy consumption for each site because information on other fuel uses, such as natural gas, coal, and fuel, is not available.

Primary REEP Contact:

Eileen Westervelt

REEP Manager

U.S. Army Corps of Engineering Research Laboratory Energy Branch

Phone: (800) USA-CERL

2.2 Departments of the Navy and Marine Corps

The Naval Facilities Engineering Service Center (NFESC) collects, compiles, and analyzes all of the energy data for both the Navy and Marine Corps. For the purposes of this data collection effort, NFESC provided PNNL site-level FY 2000 energy data on Navy and Marine Corps sites, which is provided in Table A-2a, Table A-2b, and Table A-2c in the Appendix. For each site, the Navy distinguishes between multiple activities, and collects and maintains energy data on each activity. The data tables provided in this document list each naval activity. These categories include Navy housing, Navy shore activity, Marine Corps housing, Marine Corps shore activity, Cold Iron Pacific/Atlantic (activity related to when ships are at dock), GOCO

(government owned/contractor operated), Simulators/training, Transmitters, and Cogeneration. The following list shows the data that is provided for each applicable activity for each site:

- Site name and location
- Activity
- Gross square footage
- Annual total site-level energy consumption and cost
- Annual energy consumption and cost broken down by utility: electricity, natural gas, fuel oil, steam, coal, and propane.

All of this data collected by NFESC is stored in an extensive database available to the public on the Internet through their Web site, <http://www.nfesc.navy.mil/navyenergy>. The data is provided at various levels of the Navy organization: Major Claimant, Sub-Claimant and Area, Naval Facilities Engineering Field Division, and specific Navy Sites. Charts are provided that show quarterly energy consumption and cost data. This data usually lags behind by about 6 months.

Primary Navy Contact:

David Borroell

Phone: (805) 982-3594

Email: energydata@nfesc.navy.mil

2.3 National Aeronautics and Space Administration (NASA)

NASA collects site-level information at NASA headquarters in a secure central database system. There are 18 sites for which NASA collects and maintains energy use data. NASA has provided PNNL with site-level FY 2000 energy use information in three categories for these 18 sites: standard buildings, energy intensive operations, and exempt. The NASA data can be found in Table A-3a and Table A-3b in the attached document and include.

- Site name and location
- Gross square footage
- Annual total site-level energy consumption and cost
- Annual energy consumption and cost broken down by utility: electricity, natural gas, fuel oil, steam, and LPG/propane.

Primary NASA Contact:

Richard Wickman

Environmental Management Division

National Aeronautics and Space Administration

Phone: (202) 358-1113

Email: rwickman@hq.nasa.gov

2.4 Department of State (State)

The Facility Management and Support Services headquarters in Washington DC maintains the energy data for all State sites. Individual site managers' supply data to the central location for reporting purposes. State has 14 sites that are categorized as standard buildings and 4 sites that are exempt. State has provided PNNL with site-level energy FY 2000 data on both of these categories in the following detail, which is shown in Table A-4a and Table A-4b in the Appendix:

- Site name and location
- Gross square footage
- Annual total site-level energy consumption and cost
- Energy consumption and cost broken down by utility: electricity, natural gas, and steam.

Primary State Contact:

Tim Arthurs
Director of Facility Management and Support Services
Department of State
Phone: (202) 647-8970
Email: ArthursRT2@state.gov

2.5 Department of Justice – Bureau of Prisons (DOJ-BOP)

The Department of Justice - Bureau of Prisons was the only bureau within the DOJ that responded to our data request. The BOP has six regions -- each region reports site-level energy data to the main facilities headquarters in Washington DC. As shown in Table A-5a and Table A-5b in the Appendix, the following data points were provided by BOP for FY 2000:

- Site name
- Energy consumption broken by utility: electricity, natural gas, fuel oil, and steam
- Annual water consumption and cost .

Primary BOP Contact:

Energy Conservation Program Manager
Federal Bureau of Prisons
500 First St. NW
Washington DC 20534

3 CONCLUSION

It is our intention that this data be used to help characterize sites for energy projects by assembling prioritized sites based on criteria such as site size, energy consumption, energy use intensity, or energy costs. These factors can provide insight to how sites use energy and which sites might be particularly good candidates for projects. The following Appendix details all of the data that was collected by the responding agencies.

Appendix A

AGENCY DATA TABLES

Federal Agency Site-Level Energy Data

The following tables represent the energy and related data that was collected from each agency that released site-level information. To the extent possible, the format of the data is consistent. However, each agency collects and reports energy data in a different manner therefore, each table may vary. Each agency provided FY 2000 data and some agencies provided baseline (FY 1985 or FY 1990) as well. It should be noted that specific acronyms for site names are not defined in these tables, as in the case of the Navy. If definitions are needed for specific acronyms, get in touch with the agency contact that is listed in the main body of this report.

Several agencies provided large data sets with many data points. These data sets require tables with numerous columns. Therefore, these tables are separated into two or three tables labeled as a., b., and c. All of the data is sorted first by DOE Region and second by location (state and city). To better help you navigate through the tables, a site ID number has been prescribed to each site, listed in the farthest left hand column.

If data is needed in a different format than is presented in the Appendix, please contact Kate McMordie at (505) 899-3609 or kate.mcmordie-stoughton@pnl.gov for assistance.

A general format has been followed for each table, which is shown below in the table template below. This format varies depending on the level of detail that each agency provided.

Table Template
