Association of C-reactive Protein with Early-stage Carotid Atherosclerosis in Japanese Patients with Early-stage Type 2 Diabetes Mellitus

Tomoya MITA, Hirotaka WATADA, Hiroshi UCHINO, Tomoaki SHIMIZU, Takahisa HIROSE, Yasushi TANAKA and Ryuzo KAWAMORI

Table 3 contains a typographical error. The correct version of Table 3 is given below:

Table 3.

Multivariate regression analysis of mean IMT of the common carotid artery as a dependent variable

	β -coefficient	<i>P</i> value	
Mean CCA-IMT			$R^2 = 0.502$
Age	0.006	0.0002	
Hs-CRP	0.147	0.0042	
Diastolic BP	0.006	0.0058	

Factors examined by multivariate regression analysis were hs-CRP, HOMA-IR, Age, Gender, BMI, Diabetic duration, Systolic BP, Diastolic BP, HbA_{1c}, F-glucose, F-insulin, Total cholesterol, HDL cholesterol, LDL cholesterol, TG, sICAM-1, and Current smoking.
