

Indexes to Volume 61

SUBJECT INDEX

Mathematical Physics

- Isotropic averaging for cell-dynamical-system simulation of spinodal decomposition *Ananda Kumar* 1–5
- On the invariance of the Klein–Gordon equation with external electromagnetic field *N D Sen Gupta* 483–491
- Second invariant for two-dimensional classical syper systems *S C Mishra, Roshan Lal and Veena Mishra* 633–644

Quantum Mechanics

- Matrix factorization method for the Hamiltonian structure of integrable systems *S Ghosh, B Talukdar and S Chakrabarti* 161–165
- Higher-order semiclassical energy expansions for potentials with non-integer powers *Asiri Nanayakkara* 739–747

General Relativity and Gravitation

- A charged spherically symmetric solution *K Moodley, S D Maharaj and K S Govinder* 493–499
- Non-static plane symmetric cosmological model in Wesson’s theory *B Mishra* 501–506
- On Bianchi-I cosmic strings coupled with Maxwell fields in bimetric relativity *V Mahurpawar and S D Deo* 655–658

Statistical Physics

- Thermal state of the general time-dependent harmonic oscillator *Jeong-Ryeol Choi* 7–20
- What price the spin-statistics theorem? *E C G Sudarshan and I M Duck* 645–653

Particle Physics

- Single decay-lepton angular distributions in polarized $e^+e^- \rightarrow t\bar{t}$ and simple angular asymmetries as a measure of CP-violating top dipole couplings *Saurabh D Rindani* 33–50
- Theoretical summary talk of QCD 2002 *Rahul Basu* 787–792

Partons and jets at the LHC	<i>Davison E Soper</i>	793–802
α_s Measurements	<i>Sunanda Banerjee</i>	803–817
Structure function measurements from HERA	<i>A Mehta</i>	819–826
The JLab polarization transfer measurements of proton elastic form factor	<i>C F Perdrisat and V Punjabi</i>	827–835
Exclusive processes at Jefferson Lab	<i>Haiyan Gao</i>	837–846
Review of Brookhaven nuclear transparency measurements in $(p, 2p)$ reactions at large Q^2	<i>Alan S Carroll</i>	847–858
Spin physics at RHIC: Present and future	<i>Abhay Deshpande</i>	859–864
PHOBOS at RHIC: Some global observations	<i>Alan S Carroll</i>	865–876
The quark gluon plasma: Lattice computations put to experimental test	<i>Sourendu Gupta</i>	877–888
Lattice quantum chromodynamics: Some topics	<i>Rajiv V Gavai</i>	889–899
Connections between quantum chromodynamics and condensed matter physics	<i>Shailesh Chandrasekharan</i>	901–910
Review of chiral perturbation theory	<i>B Ananthanarayan</i>	911–920
Chiral quark model	<i>H Weigel</i>	921–930
Strong interaction at finite temperature	<i>S Mallik</i>	931–941
Anomalies, symmetries and strangeness content of the proton	<i>J Pasupathy</i>	943–947
Some observations on interpolating gauges and non-covariant gauges	<i>Satish D Joglekar</i>	949–953
Topological field patterns in the Yang–Mills theory	<i>E Harikumar, Indrajit Mitra and H S Sharatchandra</i>	955–959
Half-monopoles in the Yang–Mills theory	<i>E Harikumar, Indrajit Mitra and H S Sharatchandra</i>	961–965
Fermions in light front transverse lattice quantum chromodynamics	<i>Dipankar Chakrabarti, Asit K De and A Harindranath</i>	967–977
Transversity of quarks in a nucleon	<i>K Bora and D K Choudhury</i>	979–985
The proton electromagnetic form factor F_2 and quark orbital angular momentum	<i>Pankaj Jain and John P Ralston</i>	987–992
Nuclear effects in the structure functions	<i>E Marco, E Oset and S K Singh</i>	993–999
Nuclear physics at small distances	<i>B K Jain</i>	1001–1008

- Dihyperons in chiral color dielectric model *S C Phatak* 1009–1013
- Low energy K^+ scattering on $N = Z$ nuclei *Swapan Das and Arun K Jain* 1015–1019
- Collective flow in relativistic heavy-ion collisions *R S Bhalerao* 1021–1025
- Radial, sideward and elliptic flow at AGS energies *P K Sahu and A Ohnishi* 1027–1032
- Effect of pre-existing baryon inhomogeneities on the dynamics of quark–hadron transition *Soma Sanyal* 1033–1037
- Implications of cosmic string induced density fluctuations at the quark–hadron transition *Biswanath Layek, Soma Sanyal and Ajit M Srivastava* 1039–1043
- Phase space description of the production of quark gluon plasma in heavy-ion collisions *Ambar Jain and V Ravishankar* 1045–1049
- Types of two-dimensional $N = 4$ superconformal field theories *Abbas Ali* 1065–1078
- Nuclear Physics**
- Fusion, resonances and scattering in $^{12}\text{C} + ^{12}\text{C}$ reaction *B Sahu, S K Agarwalla and C S Shastry* 51–66
- Resonant spin-flavor precession constraints on the neutrino parameters and the twisting structure of the solar magnetic fields from the solar neutrino data *S Dev, Jyoti Dhar Sharma, U C Pandey, S P Sud and B C Chauhan* 67–83
- Systematics of the $K^\pi = 2^+$ gamma vibrational bands and odd–even staggering *J B Gupta and A K Kavathekar* 167–176
- Hexadecapole deformation studies in $^{148,150}\text{Nd}$ *B S Nara Singh, V Nanal and R G Pillay* 507–515
- A relativistic mean-field study of magic numbers in light nuclei from neutron to proton drip-lines *T K Jha, M S Mehta, S K Patra, B K Raj and Raj Gupta* 517–527
- Fusion of light exotic nuclei at near-barrier energies; Effect of inelastic excitation *P Banerjee, K Krishan, S Bhattacharya and C Bhattacharya* 529–538
- Quantum molecular dynamics approach to estimate spallation yield from $p + ^{208}\text{Pb}$ reaction at 800 MeV *P K Sarkar and Maitreyee Nandy* 675–684
- The continuum shell-model neutron states of ^{209}Pb *Ramendra Nath Majumdar* 1079–1088
- Observation of high spin levels in ^{131}Cs from ^{131}Ba decay *M Sainath, Dwaraka Rani Rao, K Venkataramaniah and P C Sood* 1157–1162

Atomic and Molecular Physics

- Millimeterwave spectroscopy of transient molecules produced in a DC discharge
A I Jaman 85–91
- Anomalous scattering factors of some rare earth elements evaluated using photon interaction cross-sections
S B Appaji Gowda, M L Mallikarjuna, R Gowda and T K Umesh 539–551
- Dynamical properties of a two-level system with arbitrary nonlinearities
Mahmoud Abdel-Aty and Nour A Zidan 553–561
- Differential and integral cross-sections of e-O₂, O₃, NO, CO scattering at energies 100–1000 eV
P M Patel and K N Joshipura 685–692
- Pseudo information entropy of a three-level atom interaction with two-laser fields in Λ -configuration
A-S F Obada, T M El-Shahat and M Abdel-Aty 749–752

Lasers and Optics

- High gain L-band erbium-doped fiber amplifier with two-stage double-pass configuration
S W Harun, N Tamchek, P Poopalan and H Ahmad 93–97
- Phase conjugation of gap solitons: A numerical study
V S C Manga Rao and S Dutta Gupta 563–575
- Non-linear propagation of laser beam and focusing due to self-action in optical fiber: Non-paraxial approach
R K Khanna and R C Chouhan 693–706
- Dynamics of cascade three-level system interacting with the classical and quantized field
Mihir Ranjan Nath, Surajit Sen and Gautam Gangopadhyay 1089–1100
- A DC excited waveguide multibeam CO₂ laser using high frequency pre-ionization technique
S V Deshmukh and C Rajagopalan 1101–1107

Fluid Dynamics

- Canonical structure of evolution equations with non-linear dispersive terms
B Talukdar, J Shamanna and S Ghosh 99–107
- Energy fluxes in helical magnetohydrodynamics and dynamo action
Mahendra K Verma 707–724

Plasma Physics

- Jeans instability of an inhomogeneous streaming dusty plasma
B P Pandey, B Van Der Holst, J Vranješ and S Poedts 109–120
- Superiority of Bessel function over Zernicke polynomial as base function for radial expansion in tomographic reconstruction
A K Chattopadhyay and C V S Rao 141–152

- Dust-cyclotron and dust-lower-hybrid modes in self-gravitating magnetized dusty plasmas *A K Banerjee, M N Alam and A A Mamun* 177–182
- Field theoretic calculation of energy cascade rates in non-helical magneto-hydrodynamic turbulence *Mahendra K Verma* 577–594
- Three-dimensional wake potential in a streaming dusty plasma
M Salahuddin, M K Islam, A K Banerjee, M Salimullah and S K Ghosh 595–599
- Surface plasma waves over bismuth-vacuum interface *Ashim P Jain and J Parashar* 625–631
- Electrothermal efficiency, temperature and thermal conductivity of plasma jet in a DC plasma spray torch *G Shanmugavelayutham and V Selvarajan* 1109–1119
- Optimization of soft x-ray line emission from laser-produced carbon plasma with laser intensity *A Chowdhury, R A Joshi, G P Gupta, P A Naik and P D Gupta* 1121–1128
- Dynamical interplay between fluctuations, electric fields and transport in fusion plasmas *C Hidalgo, B Gonçalves and M A Pedrosa* 1163–1169
- Parametric instabilities in magnetized bi-ion and dusty plasmas
N F Cramer, M P Hertzberg and S V Vladimirov 1171–1177
- Application of plasma focus installations for a study of the influence of deuterium cumulative flows on materials
L I Ivanov, A I Dedyurin, I V Borovitskaya, O N Krokhin, V Ya Nikulin, S N Polukhin, A A Tikhomirov and A S Fedotov 1179–1185
- Hard X-ray bursts and DD microfusion neutrons from complex plasmas of vacuum discharge *Yu K Kurilenkov and M Skowronek* 1187–1196
- Dust acoustic shock wave generation due to dust charge variation in a dusty plasma
M R Gupta, S Sarkar, M Khan and Samiran Ghosh 1197–1201
- Centrifugal acceleration of plasmas in pulsar magnetosphere
R T Gangadhara and V Krishan 1203–1207
- Non-linear high-frequency waves in the magnetosphere
S Moolla, R Bharuthram, S V Singh and G S Lakhina 1209–1214
- Effect of ionized plasma medium on the radiation from a RITMA structure on ferrite substrate
V Bhardwaj, V K Tiwari, D Bhatnagar, J S Saini and K B Sharma 1215–1218
- Condensed Matter Physics**
- Dynamics of hydrogen in hydrogenated amorphous silicon
Ranber Singh and S Prakash 121–129

- Comparison of resonant tunneling in AlGaAs/GaAs parabolic and diffusion modified quantum wells *Sudhira Panda, B K Panda and S Fung* 131–139
- Effect of pressure on electrical resistance of WSe₂ single crystal
Rajiv Vaidya, Neha Bhatt, S G Patel, A R Jani, Alka B Garg, V Vijayakumar and B K Godwal 183–186
- Recent results on some columnar paramagnetic metallomesogens
W Haase, S Wrobel and K Falk 189–198
- Molecular engineering of discotic nematic liquid crystals *Sandeep Kumar* 199–203
- Contribution of proton NMR relaxation to the investigation of molecular dynamics in columnar mesophases of discotic and polycatenar molecules
A C Ribeiro, P J Sebastiao and C Cruz 205–218
- Columnar phases exhibited by some polycatenar ligands and a few related metal complexes
B K Sadashiva and V A Raghunathan 219–229
- The elusive thermotropic biaxial nematic phase in rigid bent-core molecules
Bharat R Acharya, Andrew Primak, Theo J Dingemans, Edward T Samulski and Satyendra Kumar 231–237
- Banana-shaped 1,2,4-oxadiazoles *S I Torgova, T A Geivandova, O Francescangeli and A Strigazzi* 239–248
- Ordering in nematic liquid crystals from NMR cross-polarization studies
K V Ramanathan and Neeraj Sinha 249–262
- Electric field generated solitons, disclinations and vortical flows in freely suspended nematic 8CB *K S Krishnamurthy and R Balakrishnan* 263–275
- The cone phase of liquid crystals: Triangular lattice of double-tilt cylinders
Yashodhan Hatwalne and N V Madhusudana 277–283
- Insights on some chiral smectic phases *B Pansu* 285–295
- Viscoelastic modes in chiral liquid crystals *K A Suresh* 297–312
- Displaying gray shades in liquid crystal displays *T N Ruckmongathan* 313–329
- Conducting polymer based biomolecular electronic devices
B D Malhotra and Rahul Singhal 331–343
- Statistical mechanics of thermal denaturation of DNA oligomers
Navin Singh and Yashwant Singh 345–352
- The elastic theory of a single DNA molecule *Haijun Zhou, Yang Zhang and Zhang-Can Ou-Yang* 353–360
- Hydrophobicity-induced drying transition in alkanethiol self-assembled monolayer water interface *V Lakshminarayanan and Ujjal Kumar Sur* 361–371

- Fluorescence confocal polarizing microscopy: Three-dimensional imaging of the director *O D Lavrentovich* 373–384
- Bidimensional distortion in ferroelectric liquid crystals with strong anchoring in bookshelf geometry *S Ponti, M Becchi, A Strigazzi and S Torgova* 385–393
- Banana-shaped molecules derived from substituted isophthalic acids
H T Nguyen, J P Bedel, J C Rouillon, J P Marcerou and M F Achard 395–404
- On some liquid crystalline phases exhibited by compounds made of bent-core molecules and their mixtures with rod-like molecules
R Pratibha, N V Madhusudana and B K Sadashiva 405–415
- Influence of hydrogen bonding on the generation and stabilization of liquid crystalline polyesters, poly(esteramide)s and polyacrylates *C K S Pillai, K Y Sandhya, J D Sudha and M Saminathan* 417–423
- Segmented conjugated polymers *G Padmanaban and S Ramakrishnan* 425–434
- Photo-orientation at liquid crystal–polymer interfaces *I Jánossy* 435–445
- Structures of some surfactant–polyelectrolyte complexes
Rema Krishnaswamy, V A Raghunathan and A K Sood 447–454
- From antiferroelectricity to ferroelectricity in smectic mesophases formed by bent-core molecules *Carsten Tschierske and Gert Dantlgraber* 455–481
- Quantum treatment of the Anderson–Hasegawa model in the presence of superexchange *P A Sreeram, Manidipa Mitra and Sushanta Dattagupta* 601–609
- Surface critical magnetic field $H_{c3}(T)$ of a bulk superconductor MgB_2 using two-band Ginzburg–Landau theory *I N Askerzade* 611–616
- Magnetic behaviour of nano-particles of $Fe_{2.9}Zn_{0.1}O_4$ *Subhash Chander, Sudhish Kumar, Anjali Krishnamurthy, Bipin K Srivastava and V K Aswal* 617–624
- Measurements on polar liquids at a microwave frequency – evaluation of molecular parameters – a new method
M B R Murthy, B S Dyasagar and R L Patil 725–727
- Temperature dependence of the fundamental band gap parameters in cadmium-rich $Zn_xCd_{1-x}Se$ using photoluminescence spectroscopy
Lalita Gupta, S Rath, S C Abbi and F C Jain 729–737
- New isothermal equation of state of solids applied to high pressures
Piyush Kuchhal and Narsingh Dass 753–757
- Relaxation phenomena of polar non-polar liquid mixtures under low and high frequency electric field
K Dutta, S K Sit and S Acharyya 759–772

- Magnetic relaxation in a three-dimensional ferromagnet with weak quenched random-exchange disorder *S N Kaul and Anita Semwal* 1129–1144
- Order parameter anisotropy of MgB_2 using specific heat jump of layered superconductors *I N Askerzade* 1145–1149
- Room temperature Compton profiles of conduction electrons in α -Ga metal *B P Panda and N C Mohapatra* 1151–1156

Geophysics, Astronomy and Astrophysics

- Study of solar features causing GMSs with $250\gamma < H < 400\gamma$
Santosh Kumar and Mahendra Pratap Yadav 21–31
- Higher dimensional homogeneous cosmology in Lyra geometry
F Rahaman, S Das, N Begum and M Hossain 153–159
- Radial oscillations of magnetized proto strange stars in temperature- and density-dependent quark mass model
V K Gupta, Asha Gupta, S Singh and J D Anand 659–668
- Observation of very low frequency emissions at Indian Antarctic station, Maitri *R P Patel, R P Singh, Ashok K Singh, A K Gwal and D Hamar* 773–778

Cosmology

- Anisotropic cosmological models and generalized scalar tensor theory
Subenoy Chakraborty, Batul Chandra Santra and Nabajit Chakravarty 669–673
- Cosmological models in general relativity *B B Paul* 1055–1063

Comment

- Comment: “On the computation of molecular auxiliary functions A_n and B_n ”
Frank E Harris C779–C780
- Response to the Comment: “On the computation of molecular auxiliary functions A_n and B_n ”
I I Guseinov C781–C783
