

# Indexes to Volume 73

## SUBJECT INDEX

### General

- Note on the natural system of units *Luis J Boya,  
Cristian Rivera and E C G Sudarshan* 961–968

### Mathematical Physics

- Complexification of three potential models – II  
*Sanjib Meyur and S Debnath* 627–637
- Travelling wave solutions for a singularly perturbed Burgers–KdV equation  
*M B A Mansour* 799–806
- On the discovery of the Greisen–Zatsepin–Kuzmin cut-off  
*Tadeusz Wibig* 807–820

### Quantum Physics

- From  $\mathcal{PT}$ -symmetric quantum mechanics to conformal field theory  
*Patrick Dorey, Clare Dunning and Roberto Tateo* 217–239
- Reality and non-reality of the spectrum of  $\mathcal{PT}$ -symmetric operators:  
Operator-theoretic criteria *E Caliceti and S Graffi* 241–249
- Statistical features of quantum evolution *Sudhir R Jain* 251–257
- Conduction bands in classical periodic potentials  
*Tanwa Arpornthip and Carl M Bender* 259–267
- Non-Hermitian Hamiltonians with a real spectrum and their physical  
applications *Ali Mostafazadeh* 269–277
- The non-equivalence of pseudo-Hermiticity and presence of antilinear  
symmetry *Petr Siegl* 279–286
- Classical and quantum mechanics of complex Hamiltonian systems: An  
extended complex phase space approach *R S Kaushal* 287–297
- Sturm–Schrödinger equations: Formula for metric  
*Miloslav Znojil and Hendrik B Geyer* 299–306
- Spectra of  $\mathcal{PT}$ -symmetric Hamiltonians on tobogganic contours  
*Hynek Bíla* 307–314
- Level crossings in complex two-dimensional potentials  
*Qing-Hai Wang* 315–322
- Scarcity of real discrete eigenvalues in non-analytic complex  $\mathcal{PT}$ -  
symmetric potentials *Zafar Ahmed* 323–328
- Spontaneous breakdown of  $\mathcal{PT}$  symmetry in the complex Coulomb po-  
tential *G Lévai* 329–335

- Isospectrality of conventional and new extended potentials, second-order supersymmetry and role of  $\mathcal{PT}$  symmetry  
*B Bagchi, C Quesne and R Roychoudhury* 337–347
- Solution of an analogous Schrödinger equation for  $\mathcal{PT}$ -symmetric sextic potential in two dimensions  
*Fakir Chand, S C Mishra and Ram Mehar Singh* 349–361
- Particles versus fields in  $\mathcal{PT}$ -symmetrically deformed integrable systems  
*Andreas Fring* 363–373
- Compactons in  $\mathcal{PT}$ -symmetric generalized Korteweg–de Vries equations  
*Carl M Bender, Fred Cooper, Avinash Khare, Bogdan Mihaila and Avadh Saxena* 375–385
- New quasi-exactly solvable Hermitian as well as non-Hermitian  $\mathcal{PT}$ -invariant potentials  
*Avinash Khare and Bhabani Prasad Mandal* 387–395
- Supersymmetric quantum mechanics living on topologically non-trivial Riemann surfaces  
*Miloslav Znojil and Vít Jakubský* 397–404
- Use of supersymmetric isospectral formalism to realistic quantum many-body problems  
*Barnali Chakrabarti* 405–416
- Some recent developments in non-equilibrium statistical physics  
*K Mallick* 417–451
- Chaotic systems in complex phase space  
*Carl M Bender, Joshua Feinberg, Daniel W Hook and David J Weir* 453–470
- The structure of states and maps in quantum theory  
*Sudhavathani Simon, S P Rajagopalan and R Simon* 471–483
- Entanglement in non-Hermitian quantum theory  
*Arun K Pati* 485–498
- Minimal classical communication and measurement complexity for quantum information splitting of a two-qubit state  
*Prasanta K Panigrahi, Siddharth Karumanchi and Sreraman Muralidharan* 499–504
- Transition from Poisson to circular unitary ensemble  
*Vinayak and Akhilesh Pandey* 505–519
- Random matrix ensembles with random interactions: Results for EGUE(2)- $SU(4)$   
*Manan Vyas and V K B Kota* 521–531
- A random matrix approach to RNA folding with interaction  
*I Garg and N Deo* 533–541
- Resonance eigenfunctions in chaotic scattering systems  
*Martin Sieber* 543–551
- Probabilistic interpretation of resonant states  
*Naomichi Hatano, Tatsuro Kawamoto and Joshua Feinberg* 553–564
- Statistics of resonances in one-dimensional continuous systems  
*Joshua Feinberg* 565–572

- Effective mass theory of a two-dimensional quantum dot in the presence of magnetic field  
*Himanshu Asnani, Raghu Mahajan, Praveen Pathak and Vijay A Singh* 573–580
- Re-appraisal of the  $P, T$ -odd interaction constant  $W_d$  in YbF: Relativistic configuration interaction approach  
*Malaya K Nayak and Rajat K Chaudhuri* 581–586
- On the concept of spectral singularities  
*Gusein Sh Guseinov* 587–603
- Octonion wave equation and tachyon electrodynamics  
*P S Bisht and O P S Negi* 605–613
- Quantum information paradox: Real or fictitious?  
*Abhas Mitra* 615–622
- Do the generalized Fock-state wave functions have some relations with classical initial condition?  
*Jeong Ryeol Choi, Kyu Hwang Yeon, In Hyun Nahm and Seok Seong Kim* 821–828
- Quasi-bound states, resonance tunnelling, and tunnelling times generated by twin symmetric barriers  
*A Uma Maheswari, P Prema, S Mahadevan and C S Shastry* 969–988
- Statistical Physics**
- Hybrid synchronization of hyperchaotic Lu system  
*K Sebastian Sudheer and M Sabir* 781–786
- Random matrix theory for pseudo-Hermitian systems: Cyclic blocks  
*Sudhir R Jain and Shashi C L Srivastava* 989–997
- Synchronization and suppression of chaos in non-locally coupled map lattices  
*R M Szmoski, S E de S Pinto, M T Van Kan, A M Batista, R L Viana and S R Lopes* 999–1009
- Global chaos synchronization of coupled parametrically excited pendula  
*O I Olusola, U E Vincent and A N Njah* 1011–1022
- Particle Physics**
- Developments in high energy theory  
*Sunil Mukhi and Probir Roy* 3–60
- Application of FIRE for the calculation of photon matrix elements  
*Norihisa Watanabe* 639–655
- $U_e(1)$ -covariant  $R_\xi$  gauge for the two-Higgs doublet model  
*C G Honorato and J J Toscano* 1023–1039
- Flavour equilibration studies of quark-gluon plasma with non-zero baryon density  
*Abhijit Sen* 1041–1057
- Nuclear Physics**
- Microscopic study of low-lying yrast spectra and deformation systematics in neutron-rich  $^{98-106}\text{Sr}$  isotopes  
*Anil Chandan, Suram Singh, Arun Bharti and S K Khosa* 657–668

- Measurement and theoretical estimation of induced activity in  $^{nat}\text{In}$  by high energy neutrons  
*Maitreyee Nandy, P K Sarkar, N Nakao and T Shibata* 669–683
- Multiplicity fluctuations of pions and protons at SPS energy – An in-depth analysis with factorial correlator  
*Dipak Ghosh, Argha Deb, Madhumita Banerjee Lahiri, Subrata Biswas and Pasupati Mandal* 685–697
- Intrinsic  $g_K$  factors of odd-mass  $^{167-179}\text{Lu}$  isotopes  
*H Yakut, A A Kuliev, E Guliyev and Z Yildirim* 829–837
- Temperature and angular momentum dependence of the quadrupole deformation in sd-shell  
*P A Ganai, J A Sheikh, I Maqbool and R P Singh* 839–846
- The neutron–proton pairing and the moments of inertia of the rare earth even–even nuclei  
*A E Calik, C Deniz and M Gerçeklioglu* 847–857
- The influence of the nature of soil and plant and pollution on the  $^{238}\text{U}$ ,  $^{232}\text{Th}$ ,  $^{222}\text{Rn}$  and  $^{220}\text{Rn}$  concentrations in various natural honey samples using nuclear track detectors: Impact on the adult consumers  
*M A Misdaq and A Mortassim* 859–879
- Stability of  $^{244-260}\text{Fm}$  isotopes against alpha and cluster radioactivity  
*K P Santhosh, R K Biju and Sabina Sahadevan* 1059–1072
- Atomic and Molecular Physics**
- Structures, energetics and magnetic properties of  $(\text{NiSn})_n$  clusters with  $n = 1-6$   
*V H Shewale, M D Deshpande and D G Kanhere* 699–710
- Measurement of vacancy transfer probability from K to L shell using K-shell fluorescence yields  
*Ö Söğüt, E Büyükkasap, A Küçükönder and T Tarakçıoğlu* 711–718
- Vibrational spectrum of  $\text{CF}_4$  isotopes in an algebraic model  
*Joydeep Choudhury, Srinivasa Rao Karumuri, Nirmal Kumar Sarkar and Ramendu Bhattacharjee* 881–887
- Vibrational analysis of Fourier transform spectrum of the  $\text{A}^3\Pi_0-\text{X}^1\Sigma^+$  and  $\text{B}^3\Pi_1-\text{X}^1\Sigma^+$  transitions of indium monobromide  
*Renu Singh, K N Uttam, M D Saksena and M N Deo* 889–899
- Optics**
- Intense, ultrashort light and dense, hot matter  
*G Ravindra Kumar* 113–155
- A phase-matchable nonlinear optical crystal 4-amino-5-mercapto-3-[1-(4-isobutylphenyl)ethyl]-1,2,4-triazole: Synthesis, crystal growth and characterization  
*K Naseema, Vijayalakshmi Rao, K V Sujith and Balakrishna Kalluraya* 719–729
- Measurement of refractive index of biaxial potassium titanyl phosphate crystal plate using reflection spectroscopic ellipsometry technique  
*A K Chaudhary, A Molla and A Asfaw* 731–741

- Method of implementing frequency-encoded NOT, OR and NOR logic operations using lithium niobate waveguide and reflecting semiconductor optical amplifiers  
*Sisir Kumar Garai and Sourangshu Mukhopadhyay* 901–912
- Fluid Dynamics**
- Statistical properties of turbulence: An overview  
*Rahul Pandit, Prasad Perlekar and Samriddhi Sankar Ray* 157–191
- Computer simulation of viscous fingering in a lifting Hele-Shaw cell with grooved plates  
*Sujata Tarafdar, Soma Nag, Tapati Dutta and Suparna Sinha* 743–754
- Plasma Physics**
- Stimulated Brillouin scattering of an electromagnetic wave in weakly magnetized plasma with variably charged dust particles  
*Sourabh Bal and M Bose* 787–792
- Dust acoustic solitary and shock waves in strongly coupled dusty plasmas with nonthermal ions  
*Hamid Reza Pakzad and Kurosh Javidan* 913–926
- Low-frequency fluctuations in a pure toroidal magnetized plasma  
*P K Sharma, R Singh and D Bora* 1073–1086
- Condensed Matter Physics**
- Five-fold way to new high  $T_c$  superconductors  
*G Baskaran* 61–112
- Terahertz oscillations in mercury cuprate superconductors  
*Z Güven Özdemir, Ö Aslan and Ü Onbaşlı* 755–763
- Structural and magnetic properties of size-controlled  $\text{Mn}_{0.5}\text{Zn}_{0.5}\text{Fe}_2\text{O}_4$  nanoparticles and magnetic fluids  
*Rucha Desai, Vipul Davariya, Kinnari Parekh and Ramesh V Upadhyay* 765–780
- Stacking faults and microstructural parameters in non-mulberry silk fibres  
*S Divakara, S Madhu and R Somashekar* 927–938
- Zero-field splitting and local structure for  $\text{V}^{2+}$  ions in  $\text{CsMgX}_3$  ( $X=\text{Cl, Br, I}$ ) crystals  
*Q Wei, Q M Xu, Z Y Yang, D Y Zhang and J G Zhang* 939–944
- Growth and high pressure studies of zirconium sulphoselenide single crystals  
*K R Patel, R D Vaidya, M S Dave and S G Patel* 945–953
- Investigations of the electron paramagnetic resonance spectra of  $\text{VO}^{2+}$  in  $\text{CaO-Al}_2\text{O}_3\text{-SiO}_2$  system  
*Q Wei, P X Zhang, D Y Zhang and J H Zhou* 1087–1094
- Theoretical analysis of static properties of mixed ionic crystal:  $\text{NH}_4\text{Cl}_{1-x}\text{Br}_x$   
*D Rawat, N K Gaur, Sadhna Singh and A Gour* 1095–1103

**Interdisciplinary Physics**

The degree distribution of fixed act-size collaboration networks  
*Qinggui Zhao, Xiangxing Kong and Zhenting Hou* 955–959

**Astronomy and Astrophysics**

The gravitational dynamics of galaxies *Rajaram Nityananda* 193–214

Locally-rotationally-symmetric Bianchi type-V cosmology with heat flow  
*C P Singh and A Beesham* 793–798

Magnons interaction of spinor Bose–Einstein condensates in an optical  
lattice *Yong-Qing Liu* 1105–1110

Stability of electrostatic ion cyclotron waves in a multi-ion plasma  
*M J Kurian, S Jyothi, S K Leju, Molly Isaac,  
Chandu Venugopal and G Renuka* 1111–1122
