

The 2017 International Conference on Advanced Environmental Engineering is an academic conference on advanced environmental engineering. The conference includes the fields of environmental engineering, and is of great significance to the development of environmental engineering

The primary goal of the conference is to promote research and developmental activities in environmental engineering and another goal is to promote scientific information interchange between researchers, developers, engineers, students, and practitioners working all around the world. The conference will be held every year to make it an ideal platform for people to share views and experiences in environmental engineering and related areas and to further promote the development of environmental engineering and strengthen domestic and international academic exchanges and cooperation.

The 2017 International Conference on Advanced Environmental Engineering (ICAEE2017) was held in Shenzhen from December 15 to 17, 2017. I would like to thank the committee members of ICAEE2017 and the reviewers for their careful reviews of the papers and the suggestions for improvements.

The conference received 39 full-papers and abstract submissions from China and many other countries or regions over the world. Through a rigorous peer-review process, all submissions were refereed based on their quality of content, level of innovation, significance, originality and legibility. 39 papers were accepted and their authors were invited to present their papers at the conference. We invited two keynote speakers, who are internationally recognized leading experts in their own research areas, to deliver their recent research progresses. The proceedings are published by IOP Conference Series: Earth and Environmental Science (EES)

Let us hope that the participants of ICAEE2017 will have fruitful interactions among each other and I look forward to meeting you all in the forthcoming years.

Prof. Shaocai Yu
Zhejiang University
