## Acknowledgments

First and foremost I have to thank my wife for her patience in being a student's wife for nine years, and her love and support during my years at school. I would also like to thank my parents for teaching me the value of hard work and the love of learning. I also have to thank my children for their boundless enthusiasm for their father going to school, especially my son Thomas who loves the fact that he now gets to go to school just like his father.

I must next thank Vaidehi Nagarajan for her encouragement, insight, and willingness to let me take her idea and work with it. Vaidehi was not only interested in my research, but in my growth as a student and scientist. I must also thank William Goddard III, my professor, for taking a mathematician as a chemistry graduate student and allowing me to work on a biochemistry project. Many a time, I would run out of possible solutions to a problem only to have Goddard propose four solutions that would all work and lead towards new avenues for research.

My thanks go to the members of the methods group that started with Rene and Wely, and now includes so many more like Peter Freddolino, Peter Huskey, Victor Kam, David Zhang, Jiyoung Heo, and others I am forgetting for their programming and input into the development of tools for MembStruk. I enjoyed the company and discussions with my office companions David Zhang and Yashar Kalani, who made spending time in the super air conditioned office fun. I also want to thank every member of the Biogroup who helped me find all the bugs and fine tune my software and methods.

## Abstract

G-Protein Coupled Receptors (GPCRs) form a major target class of membrane proteins for therapeutic drug design, and the challenge is to design subtype specific drugs. Hence the knowledge of three-dimensional structure is critical to drug design for GPCRs. Since GPCRs are membrane bound proteins, there is only one crystal structure for a GPCR, namely bovine rhodopsin. The prediction of structure and function of G-protein-coupled receptors will allow for designing drugs with minimal side effects.

The focus of my thesis is the development of computational methods for prediction of structure of GPCRs and application of these methods (MembStruk) for a class of important drug targets such as chemokine receptors. MembStruk method is a hierarchical method ranging from coarse grain optimization of the trans-membrane helices to fine grain optimization of the structure in explicit lipid bilayer. The first two chapters of the thesis details the computational steps involved in MembStruk and its application to validating the method for bovine rhodopsin. The first chapter presents the method development in the most current version of the MembStruk method, version 4.30, and its application to bovine rhodopsin. The final predicted structure for bovine rhodopsin deviates from the crystal structure trans-membrane main chain atoms by 2.66 Å coordinate root mean square deviation (CRMSD), and the residues in the binding site of 11cis-retinal is only 1.37 Å CRMSD from the crystal structure for the main chain atoms. The second chapter of this thesis details the computational methods for optimization of the rotation and translation of the trans-membrane regions. These methods of rotation and translation of transmembrane helices has been further extended to the comparison of structures of two membrane proteins, and applied to the comparison

of crystal structures of bovine rhodopsin and bacteriorhodopsin. The third chapter details the graphical user interface that has been developed to automate the various steps of the MembStruk method.

Olfactory receptors are GPCRs and the molecular analysis for the recognition of odorants is very important in understanding the mechanism of olfaction. In a blind study prior to experiments, in collaboration with Dr. Bozza of Rockefeller University, I applied the MembStruk method to understanding the binding of odorants to rat and mouse olfactory receptor I7. Chapter 4 describes the application of the MembStruk method to rat and mouse I7 olfactory receptor and the binding of 65 odorants to this receptor. The last chapter describes the use of MembStruk method in predicting the structure and function of important drug targets, namely chemokine receptors CCR5 and CXCR4.

## Table of Contents

<b>Thesis: Introduction .....</b>	<b>1</b>
<b>References.....</b>	<b>9</b>

### **Chapter 1: G-Protein Coupled Receptor Structure Prediction:**

#### **MembStruk Methods and Validation using Bovine Rhodopsin**

<b>1.0 Abstract .....</b>	<b>11</b>
<b>2.0 Introduction .....</b>	<b>11</b>
<b>3.0 Methods .....</b>	<b>13</b>
3.1 ForceFields and Molecular Simulation Setup .....	16
3.2 TM2NDS v4.30 – Prediction of the Bovine Rhodopsin TM Regions ....	17
3.2.1 <i>Sequence Alignment</i> .....	17
3.2.2 <i>Coarse Hydrophobic Profile TM Prediction</i> .....	18
3.2.3 <i>Finer optimization of TM length prediction</i> .....	18
3.2.4 <i>Determination of Hydrophobic Centers</i> .....	18
3.2.5 <i>Summed Window Analysis (Optional)</i> .....	19
3.3 MembStruk v4.30 – Construction of the 3D Protein Structure.....	19
3.3.1 <i>Building the Canonical Helical Structure</i> .....	19
3.3.2 <i>Rotation and Translation of Helices (hcenterTR)</i> .....	20
3.3.3 <i>Optimization of Helical Bends and Kinks in the canonical helical structures (fixhelix)</i> .....	21

3.3.4 Coarse Grain Rotational Orientation Optimization of the TM Regions ( <i>hcenterTR-bgf</i> ).....	21
3.3.5 Fine Grain Rotation Optimization of TM Regions using all-atom FF Energy Minimization ( <i>rotmin</i> ).....	22
3.3.6 Fine Optimization of Helical Packing (RBMD).....	23
3.3.7 Generation of alternate Structures with different rotational orientations: Combinatorial Scanning of the Rotational Energy.....	23
3.3.8 Homology Modeling of Loops ( <i>makeloops</i> ).....	25
3.3.9 Closing of the EC2 Loop (EC_LOOP_SIM)(Optional) .....	26
3.3.10 Full Protein Relaxation ( <i>looprelax</i> ).....	27
3.4 HierDock v2.5BS - Function Prediction for GPCRs.....	27
3.4.1 <i>HierDock ForceFields</i> .....	27
3.4.2 Sphere Generation and Partitioning (GrowBox or Pass).....	28
3.4.3 Coarse Docking into all Potential Binding Regions.....	28
3.4.4 Ranking of Coarse Docked Structures .....	29
3.4.5 Fine Docking in the Selected Binding Site.....	30
3.4.6 Scoring of the Fine Docked Structures .....	30
3.4.7 Optimization of the Side Chains (SCREAM) .....	31
<b>4.0 Results and Discussion .....</b>	<b>31</b>
4.1 Comparison of MembStruk Rhodopsin Structures (Old and New) .....	31
4.2 Conformal Change from Open to Closed in the Rhodopsin Structure....	34
4.3 Scanning of the MembStruk Rhodopsin Structure.....	36
4.3.1 Scanning of the Open Structure .....	36

4.3.2 Scanning of the Closed Structure.....	39
4.4 Analysis of the Binding Site .....	40
<b>5.0 Conclusions.....</b>	<b>41</b>
<b>6.0 References.....</b>	<b>42</b>

## **Chapter 2: Analysis of Key Protein Properties for the Comparison of Transmembrane Proteins (MembComp)**

<b>1.0 Abstract .....</b>	<b>46</b>
<b>2.0 Introduction .....</b>	<b>46</b>
3.1 Definition of the Hydrophobic Centers .....	48
3.2 Development of the Plane of Intersection .....	50
3.3 Definition of a coordinate system on the Plane of Intersection .....	52
3.4 Definition of the Key Properties.....	53
<i>3.4.1 Helical Bend.....</i>	53
<i>3.4.2 Helical Tilt .....</i>	54
<i>3.4.3 HPM Angle.....</i>	54
<i>3.4.4 Phobic Face angle .....</i>	56
<i>3.4.5 Characteristics to measure placement of Helical Centers .....</i>	56
<i>3.4.6 Other measured properties .....</i>	56
<b>4.0 Results.....</b>	<b>57</b>
4.1 Hydrophobic centers for Rhodopsin and Bacteriorhodopsin .....	57

<i>4.2 Rhodopsin Key Properties .....</i>	59
<i>4.3 Rhodopsin Simulation Analysis .....</i>	61
<i>4.4 Bacteriorhodopsin .....</i>	63
<i>4.5 Comparision of Bovine Rhodopsin to Bacteriorhodopsin .....</i>	65
<b>5.0 Discussion .....</b>	<b>66</b>
<b>6.0 Acknowledgements .....</b>	<b>68</b>
<b>7.0 References.....</b>	<b>69</b>

### **Chapter 3: MembStruk GUI version 4.10**

<b>Introduction.....</b>	<b>83</b>
<b>Installation.....</b>	<b>84</b>
<b>Version History .....</b>	<b>87</b>
<b>GUI Chapter 0 - Main GUI interface .....</b>	<b>89</b>

## List of Tables

### Chapter 4

Table I - I7 Studied Odorants.....	224
Table II - Structural Features of M-I7 and R-I7(hom) .....	225
Table III - Comparison of structural features of the predicted structure for Mouse I7 with the x-ray crystallography results for Bovine Rhodopsin. ....	225
Table IV - Predicted Binding Energies (bindE) for 62 odorants docked to preM-I7 and preR-I7 (initial structures from MembStruk 1.0).....	226
Table V - Calculated binding energies (bindE in kcal/mol) for 62 odorants docked to M- I7 and R-I7(hom) (MembStruk 2.0).....	227
Table VI - M-I7 Binding Pocket Analysis.....	228
Table VII - R-I7(hom) binding Pocket Analysis .....	228
Table VIII - Comparison of R-I7(hom) and M-I7 Binding Pockets.....	229
Table IX - The principle moments of inertia for the final bound structure of each aldehyde in the M-I7 structure.....	229
Table X - Calculated Moment-weighted energy score from equation (2) for the 62 odorants docked to M-I7 and R-I7(hom) (MembStruk 2.0). .....	230

## List of Graphs

### Chapter 3

Graph 1 - Graph of energies for Helix 5 .....	134
Graph 2 - Plot of Helix 5's Temperature .....	134
Graph 3 - Plot of Helix 5's RMS .....	134

### Appendix A

Graph 1 – Hydrophobicity plot of the 14 sequence alignment done for rhodopsin.....	264
Graph 2 – Hydrophobic plot of the final 41 sequences that led to a successful TM prediction. ....	265
Graph 3 – Plot of Hydrophobicity after 1 <sup>st</sup> Fine grain TMPred.....	267
Graph 4 – Plot of all the data from the 1 <sup>st</sup> Fine TM Prediction. ....	269
Graph 5 – Plot of the sum of the data contained in windows 20, 22, 24, and 26. ....	269
Graph 6 – The plot of hydrophobic values after BiPeak has obtained them from the data files.....	274
Graph 10 – Helix 2 BiPeak Plot.....	275
Graph 7 – Helix 1 BiPeak plot.....	275
Graph 8 – Helix 3 BiPeak Plot.....	275
Graph 9 – Helix 4 BiPeak Plot.....	275
Graph 12 – Helix 5 BiPeak Plot.....	275
Graph 11 – Helix 6 BiPeak Plot.....	275
Graph 13 – Helix 7 BiPeak Plot.....	276

Graph 14 - Before hcenterTR Rhod1 .....	280
Graph 15 - After hcenterTR for Rhod1.....	281
Graph 16 - Before hcenterTR for Rhod2 .....	283
Graph 17 - After hcenterTR for Rhod2.....	284
Graph 18 - After hcenterTR for Rhod3.....	285
Graph 19 - Rhod2 before (black) and after rotation (green) .....	289
Graph 20 - Rhod3 after rotation of the Fixhelix bundle .....	290
Graph 21 - Helix 3 Analysis for Rhod1 .....	291
Graph 22 - Comparison of 1B Crystal (Black) to Example 1 (Green) after H3 Analysis and Rotmin.....	292
Graph 23 - Analysis of Helix 3 for Rhod2.....	293
Graph 24 - Comparison of 1B crystal (black) to Example 2 after H3 anal. and rotmin .	295
Graph 25 - Analysis of Helix 3 for Rhod3.....	296
Graph 26 - Comparison of 1B Crystal (Black) to Example 3 (Green) after H3 Analysis and Rotmin.....	297
Graph 27 - Graphs of Individual Rotation Scans for Helices 1-4 of Crystal 1HZX.....	299
Graph 28 - Graphs of Individual Rotational Scans of Helices 5-7 of Crystal 1HZX ....	300
Graph 29 - Individual Rotation Scans for 1HZX on a MembComp Graph.....	301
Graph 30 - Individual Rotation Scans for Rhod1 on a MembComp Graph .....	302
Graph 31 - Individual Rotation Scans for Rhod2 on a MembComp Graph .....	303
Graph 32 - Individual Rotation Scans for Rhod3 on a MembComp Graph .....	304
Graph 33 - Helical scan of TM 3 on the Rhod1 Structure .....	305
