Additional file 1

Figure 1

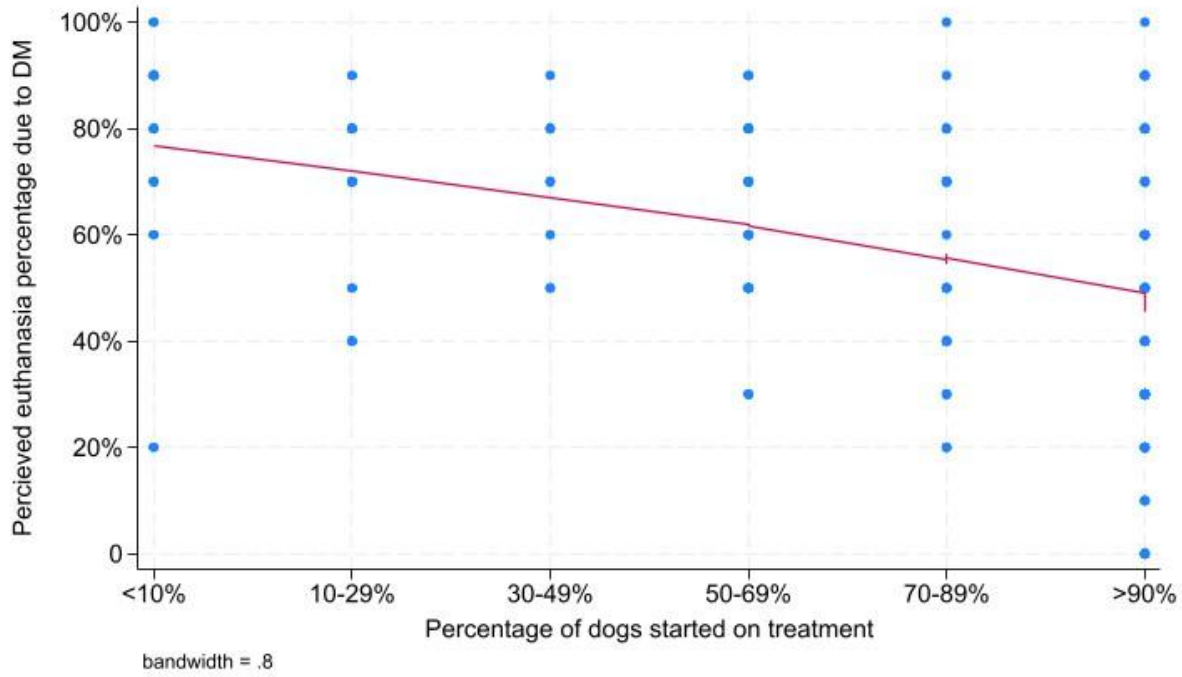

Figure 1 shows locally weighted scatterplot smoothing, bandwidth 0.8 from the questions percentage of dogs started on treatment vs perceived euthanasia percentage due to diabetes mellitus (DM)

Figure 2

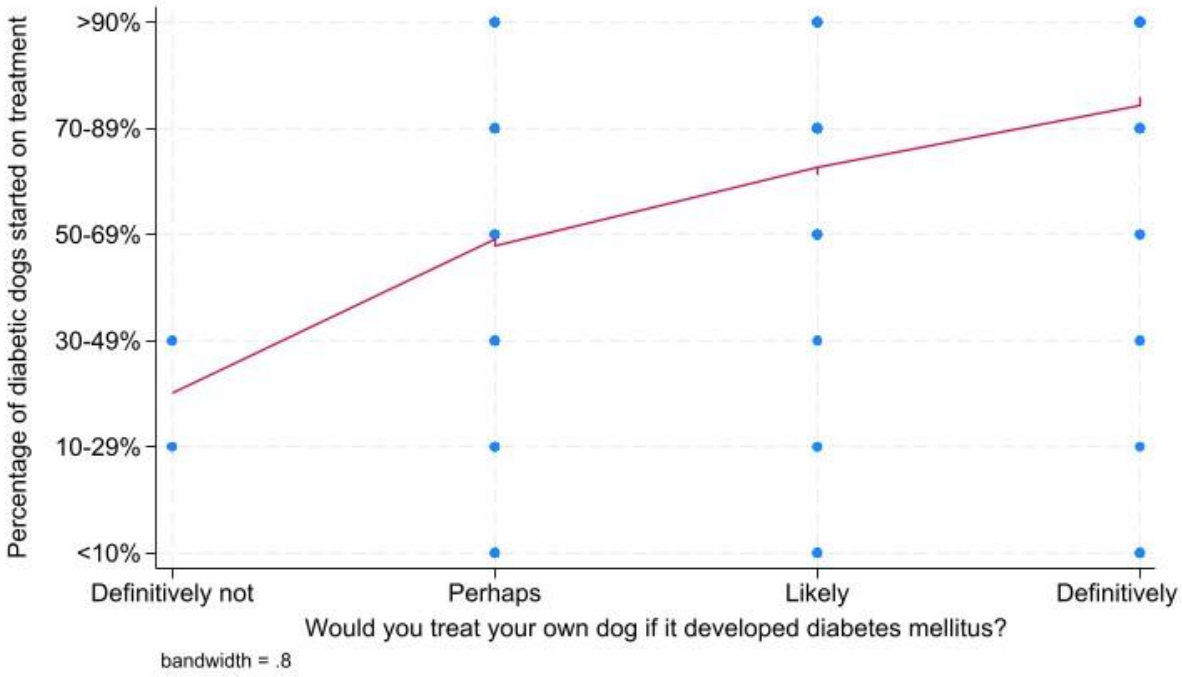

Figure 2 shows locally weighted scatterplot smoothing, bandwidth 0.8 from the questions percentage of dogs started on treatment vs perceived euthanasia percentage due to diabetes mellitus (DM)

Figure 3

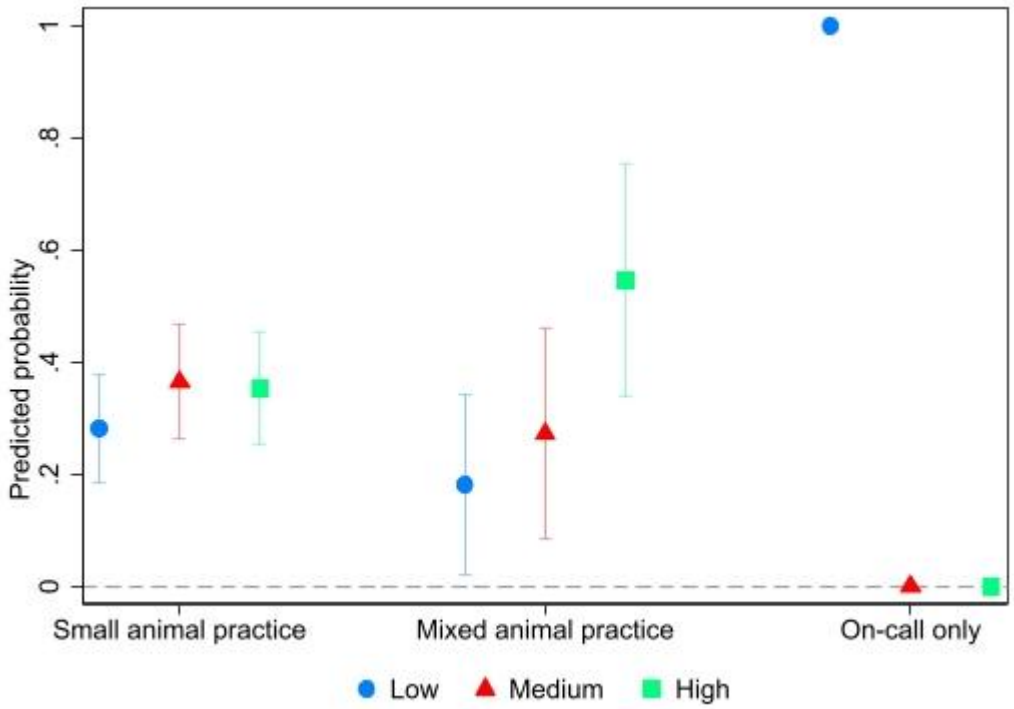

Figure 3 shows the predicted mean probabilities of grouped treatment initiation percentages against practice type. Note that "On-call only" consisted of one respondent. The vertical lines represent the 95% confidence intervals for the predicted mean. The low group included 0-29% treatment initiation rates, 30-89% and ≥ 90% in the medium and high groups, respectively.

Figure 4

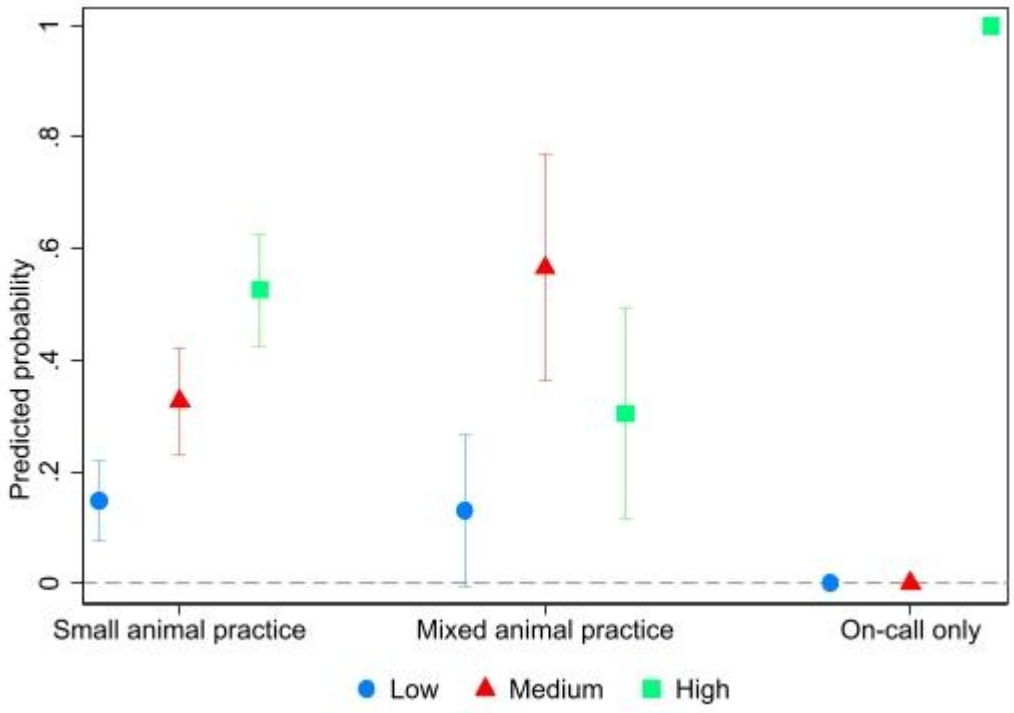

Figure 4 shows predicted mean probabilities of grouped euthanasia percentages against practice type. Note that "On-call only" consisted of one respondent. The vertical lines represent the 95% confidence intervals for the predicted mean. The low group included 0-30% euthanasia rates, 40-60% and 70-100% in the medium and high groups, respectively.
